

Benefits of having Schick CDRWireless in your dental practice

CDSOft Ltd
Practical Tips

The reasons your practice should invest in Schick CDRWireless are:

Image Quality

The first thing you need is a true picture of what you're dealing with. Count on Schicks excellent image quality. Clear, unmarred, data-full, diagnostic.

Ease of Handling

Get an instant image in 3 easy steps. It takes the clutter out of your operatory and eliminates awkward wires that your hygienist no longer has to fuss with.

Confident Diagnosis

Schick CDRWireless presents you with complete, accurate data that you can highlight and manipulate for the best possible diagnosis.

Immediate Chair-side Viewing/Trusted Case Presentation

Immediately and comfortably sit chair-side and show your patient the problems and the solutions. Let them buy into your case planning from the very beginning.

Simplifies Your Expenses

A single purchase handles it all for years to come. No film or chemicals to purchase and repurchase. No phosphor plates to check for wear and then replace – at considerable expense.

What is Schick CDRWireless?

Schick CDRWireless gives you all the great benefits of Schick CDR, only without the cord. It gives instant high-quality images, time-saving capabilities, and reduced levels of radiation.

Did you know?

A phosphor plate that gets scratched, nicked or bent will be permanently damaged. A damaged plate cannot be used and must be replaced.

According to research, the normal life of a phosphor plate was found to be limited to approximately 50 uses, before it becomes undiagnostic.
