

85% of businesses never recover from a disaster in the workplace

IT Solutions for Business

Disaster Recovery (DR) Solutions Available from CDSOFT

"In the past, we allocated 2 to 3 days annually for data recovery testing. With DPM, we can recover everything, even all of the archives, in about six hours. That is the business, literally, so it's very reassuring"

Vincent Hunt, Director ICT, Gill & MacMillan

At CDSOFT, our disaster recovery solution provides you with the confidence in a system that works and protects your business against the effects of a workplace disaster.

This covers everything from fires and floods to retrieving an important email or file from the system. Where required, we can hold your data off-site, which means it is instantaneously protected as it is stored externally.

Clients of CDSOFT who employ this DR solution have been signed off by their auditors, which has become a mandatory regulation in Ireland today. If you're looking for a disaster recovery solution that can have your data and server working within 15 minutes of a disaster striking, call CDSOFT today.

Because disasters do strike, and when they do, the implications can be catastrophic. Protect yourself and your business today; don't leave it until it's too late.

Corporate Obligation

Currently, when an auditor signs off on company accounts, irrespective of size, part of that is to have taken reasonable steps to ensure the continuity of the business, which extends to both systems and procedures. While for a PLC there are specific levels of resilience specified, auditors are beginning to refuse to sign off on companies who do not have an adequate DR plan in place. For smaller businesses, there is a less defined obligation, but an obligation nonetheless.

Disaster Recovery has fast become the number one priority for IT managers across all sectors and at all levels. It is their responsibility to ensure that their business can operate effectively in the case of a significant IT systems failure. If you are in a similar situation and do not have a DR solution in place, you need to talk to CDSOFT today.

FACTS:

- ▶ Only 6% of companies suffering from a catastrophic data loss survive
- ▶ 60% of companies that lose their data shut down within 6 months of the disaster
- ▶ 93% of companies that lost their data center for 10 days or more due to a disaster filed for bankruptcy within one year of the disaster. 50% of businesses that found themselves without data management for this same time period filed for bankruptcy immediately
- ▶ Companies that aren't able to resume operations within ten days (of a disaster hit) are not likely to survive
- ▶ 30% of all businesses that have a major fire go out of business within a year. 70% fail within five years
- ▶ A single incident of data loss costs businesses an average of €10,000
